EDUCATION

Dayananda Sagar University

Bachelor of Technology in Computer Science and Engineering (Data Science)

– CGPA: 8.2

Bengaluru, India

2022 – 2026

Kendriya Vidyalaya Meenambakkam

Senior Secondary (CBSE)

Chennai, India

2022

EXPERIENCE

Intern

Novacis Digital Pvt Ltd

Jan 2026 –Present

Chennai, India

- Developing full-stack web features using Python, Angular, and C# .NET with SQL Server as the backend database.
- Collaborating with the development team on live IT and software projects, contributing to both frontend and backend tasks.

Vizualkit AI

Gen AI Developer Intern

Aug 2025 – Oct 2025

- Developed a Retrieval-Augmented Generation (RAG) chatbot using Python, LangChain, and Gemini API
- Designed document ingestion pipelines with text chunking, MiniLM embeddings, and ChromaDB vector storage
- Implemented cosine similarity-based semantic search to retrieve relevant context and reduce LLM hallucinations
- Built a centralized conversational knowledge base from PDFs and Excel files for real-time query resolution

PROJECTS

Customer Churn Prediction | Python, Machine Learning, KNN

- Developed a KNN-based classification model to predict customer purchase behavior using demographic features
- Performed data preprocessing including feature selection, label encoding, and train-test splitting
- Applied Euclidean distance with optimal K-value selection for similarity-based classification
- Evaluated model performance using confusion matrix and accuracy, achieving 78% accuracy on unseen data

Seat Detection System using YOLO | Python, YOLO, OpenCV

- Developed a real-time seat detection system using the YOLO object detection algorithm for smart classrooms and occupancy monitoring
- Collected, labeled, and preprocessed image datasets and trained the YOLO model using Python and OpenCV with data augmentation
- Evaluated and optimized model performance using precision, recall, and confidence thresholds with real-time inference in Python

Sales Insights Dashboard | SQL, Power BI

- Engineered SQL-based ETL pipelines to cleanse and transform Dimension and Fact tables, ensuring consistent integration across 100K+ records
- Developed interactive Power BI dashboards with KPIs, trend analysis, and geo-visualizations to enable real-time sales insights
- Analyzed revenue patterns, top-performing regions, and customer segments to support data-driven business decisions

TECHNICAL SKILLS

Languages & Libraries: Python, C# .NET, SQL, Java, Pandas, NumPy, Matplotlib

Tools & Concepts: HTML, CSS, MongoDB, VS Code, Power BI, Machine Learning, Deep Learning

Certifications: Full Stack Development, Machine Learning Specialization, Data Analytics
