

Athisivasri P

Backend Software Engineer

✉ sriathisiva@gmail.com  linkedin.com/in/athisivasri-p

Education

College of Engineering Guindy

Aug 2018 – May 2022

Bachelor of Engineering in Electronics and Communication

Chennai, Tamil Nadu

Experience

Velocix

Jan 2022 – Present

Chennai, Tamil Nadu

Backend Software Engineer with 4.3 years of experience working on data-driven systems and backend services. Strong experience in data ingestion, pipeline validation, and large-scale data processing using Kafka, ClickHouse, and MongoDB. Proficient in Python and SQL, with hands-on experience ensuring data integrity, API validation, and system reliability. Currently expanding skills in data engineering and cloud-based data platforms.

Projects

Product Development: Jan 2022 – present

- Worked on data ingestion pipelines using Kafka, ClickHouse, and Filebeat, ensuring reliable data flow and processing
- Performed data validation using SQL and NoSQL databases, ensuring accuracy and consistency across large datasets
- Contributed to test strategy and planning, including identifying test scenarios, edge cases, and validation approaches
- Validated and written automation test cases for large-scale data processing systems, improving data reliability and performance.
- Created and maintained test cases and test suites for UI and backend systems, improving overall coverage. Designed and executed API test scenarios for FastAPI services
- Installed and validated the product deployment using Kubernetes and docker, ensuring reliable setup and configuration. Packaged and ran the product using Docker containers, enabling consistent environments for development, testing, and deployment.
- Designed and implemented REST APIs using FastAPI for internal services, enabling efficient data processing and integration with frontend dashboards.
- Executed and analyzed Trivy scans for container and image vulnerabilities, identifying and resolving security issues to improve product reliability.
- Conducted application security testing using AppScan and performed system/network vulnerability assessments with Nessus to identify potential risks. Assisted in analyzing and fixing issues reported by AppScan, ensuring enhanced application security and compliance.
- Designed and executed SQL queries for data validation, ensuring accuracy and consistency across APIs, databases, and data pipelines
- Designed and developed Selenium-based UI automation frameworks and test cases, reducing manual testing effort by 70%.
- Developed unit tests using Pytest for the entire product, achieving 83% code coverage and periodically validating code quality. Implemented API testing for FastAPI endpoints, ensuring functional correctness and reliability of back-end services.

Skills

Category	Skills
Programming	Python, SQL
Data Engineering	Kafka, ClickHouse, filebeat, Vector
Containerization	Docker, Kubernetes, Jenkins, Git
Automation	Selenium, Pytest, Robot Framework, Playwright
Security	Trivy, AppScan, Nessus
Cloud	OpenStack

Certifications

Year	Month	Certificate / Course
2022	02	Python Programming Bootcamp
2024	04	Selenium WebDriver with PYTHON + Frameworks
2024	07	Docker and Kubernetes practitioner KloudCamp
2025	08	Machine Learning (Python,R)

Japanese Proficiency

- JLPT N5 and N4 certified, NAT 3Q
