PROFESSIONAL SUMMARY

GenAI Engineer and Data Scientist with 7+ years of experience in IT, including 4.5 years in AI/ML and 3 years in data engineering and programming. Specialized in building and deploying large language model (LLM) applications, retrieval-augmented generation (RAG) systems, and AI-driven automation for enterprise use cases. Proven experience in developing end-to-end AI systems using Python, FastAPI, SQL, and cloud platforms (Azure, IBM Cloud), with a strong focus on scalability, reliability, and production readiness. Skilled in translating complex data and business problems into actionable, production-grade AI solutions, with strong stakeholder collaboration and consulting experience. Delivered AI systems that reduced manual effort and improved operational efficiency across enterprise workflows.

WORK EXPERIENCE

Data Scientist (GenAI)

International Business Machine (IBM) | Apr 2024 – Present

- Designed and developed an AI-powered postmortem analysis system leveraging NLP and LLMs to generate incident summaries, RCA, mitigation actions and timelines from multi-source enterprise data, reducing manual effort and improving reporting turnaround time.
- Built retrieval-augmented generation (RAG) pipelines integrating enterprise data sources, enabling context-aware responses and improving decision-making efficiency. Engineered end-to-end data pipelines, automating processes and saving ~60+ hours/month.
- Developed scalable backend APIs using FastAPI to support multiple AI-driven application features, enabling seamless integration of LLM-powered workflows into enterprise systems.
- Improved LLM output quality by optimizing prompt design, context handling, and token usage, reducing hallucinations and increasing reliability in production systems.
- Built and deployed AI-powered bots for knowledge extraction and document automation, reducing manual research effort by 50%.

Associate – Data Modelling

Data Security Council of India | Nov 2022 – Mar 2024

- Developed fraud detection models to identify anomalous financial transactions, improving detection accuracy by ~10% and reducing false positives by ~20% in production workflows.
- Designed and implemented end-to-end ML workflows, including feature engineering and model training using Python, SQL, and Azure ML, enabling scalable model deployment and improving model performance by ~11%.
- Built automated ETL pipelines to ensure reliable data ingestion and processing for model training and inference.
- Monitored and optimized production ML systems, collaborating with security teams to enable rapid detection and response to anomalies.

Learning Coach – ML Engineering

StayQrious | Dec 2021 – Aug 2022

- Transitioned from data and programming into applied machine learning by building end-to-end ML solutions, including data preprocessing, feature engineering, model training, and evaluation
- Implemented supervised learning models (classification/regression) using Python-based frameworks, working with structured datasets to solve real-world problems.

- Developed and exposed ML models through REST APIs, gaining hands-on experience in integrating models into application workflows.
- Worked across multiple use cases to translate raw data into predictive models, strengthening practical understanding of model behavior and performance trade-offs.

Data & Analytics Engineer

Third-party Consultancy | Feb 2019 – Nov 2021

- Designed and delivered data-driven dashboards and reporting solutions, transforming raw datasets into actionable business insights across analytics projects.
- Built and optimized data processing workflows using Python and SQL, including data cleaning, transformation, and aggregation for reporting use cases.
- Implemented data privacy practices such as masking and handling of sensitive fields (PII), and supported GRC-related reporting aligned with compliance and risk management requirements.

Tech Associate

Think & Learn Pvt Ltd | Jul 2018 – Jan 2019

- Developed Python scripts and integrations to automate repetitive data processing and reporting tasks, improving operational efficiency.
- Built reusable automation modules with structured error handling and logging, enhancing maintainability and reliability of workflows along with technical documentation.

TECHNICAL SKILLS

- **Programming:** Python, SQL
- **GenAI & LLMs:** LLMs (GPT-4, Claude, Gemini), Prompt Engineering, Retrieval-Augmented Generation (RAG), Embeddings, Conversational AI, Agent-based Workflows
- **AI/ML:** Machine Learning, NLP, Supervised Learning, Feature Engineering, Model Evaluation
- **Frameworks & Tools:** FastAPI, LangChain, Elasticsearch
- **Search & RAG Systems:** Azure AI Search, Elasticsearch, Indexing, Embedding Techniques, RAG Pipelines
- **Data Engineering:** Data Modeling, ETL Pipelines, Structured & Unstructured Data Processing, Data Masking (PII Handling)
- **Cloud:** Microsoft Azure (Azure Functions, Azure AI Search, Azure Machine Learning), IBM Cloud
- **Collaboration & Tools:** Git, Jira, Trello, Slack, Notion
- **Documentation:** Technical Documentation, User Guides, Product Walkthroughs, Demo Videos

EDUCATION

Master of Computer Applications | Gold Medallist | Amrita University
2023

Oct 2021 – Aug

Master of Technology | First Class | Amrita University
2018

Aug 2016 – Jun

LANGUAGES

English (Professional), Telugu (Native), Hindi (Professional)
