PROFESSIONAL EXPERIENCE

Full Stack Developer [Slaab.ai](#), India (Remote)

May 2025 – July 2025

- Worked on a pre-release AI-driven SEO platform used for automated website audits, keyword research, and content workflows.
- Owned backend feature development, including API design, background job processing, and database-backed state management from scratch.
- Worked on frontend as well to build end-to-end features, covering UI development and state management.

PROJECTS

AI Powered SEO Audit Platform (Professional Project - Slaab.ai)

May 2025 – July 2025

TypeScript, Bun.js, Hono.js, PostgreSQL(Supabase), Mastra.ai, Next.js, BullMQ, Docker, Zustand, TanStack Query

- Built an SEO audit platform that analyzes websites for technical SEO issues, keyword opportunities, and content gaps, generating actionable fixes rather than raw metrics.
- Created agentic LLM workflows using Mastra.ai to coordinate multi-step analysis across crawl data, SERP metrics, audit reasoning, and fix generation.
- Integrated DataForSEO APIs & FireCrawl to fetch crawl data, keyword intelligence, and SERP signals, normalizing and persisting results for downstream processing.
- Implemented an async, job-based execution model with BullMQ to safely handle long-running audits without blocking HTTP requests.
- Used PostgreSQL as the system of record for job state, intermediate analysis, and final reports, enabling retries, client polling, and consistency across failures.
- Built fault-tolerant background workers with retries, idempotent execution, and partial failure handling for LLM and external API calls.
- Exposed REST APIs that return job IDs for audit requests and allow clients to poll for progress and results in a production-safe manner.

Discord-like Chat Web App

Aug 2023 – Mar 2024

Next.js, TypeScript, Socket.io, Zustand, Drizzle(Postgresql), better-auth, Bun.js, Hono.js, LiveKit, TanStack Query, Turborepo

- Built a Discord-inspired chat app with servers, channels, and user roles.
- Implemented real-time messaging with Socket.IO and audio/video chat with LiveKit.
- Managed global state using Zustand and server state with TanStack Query.
- Secured authentication and backend services using AuthJS, BunJS, and HonoJS.

Notion Lite

Nov 2023 – Dec 2023

Next.js, TypeScript, TailwindCSS, Convex, Clerk, ShadcnUI

- Built a collaborative document editor with real-time syncing via Convex.
- Implemented authentication and session management using Clerk.
- Designed a responsive and accessible UI with ShadcnUI and TailwindCSS.

Game Explorer

Apr 2023 – Jun 2023

React, TypeScript, Axios, RAWG API, React Query, Chakra UI

- Developed a game discovery app using React and TypeScript.
- Integrated RAWG API with Axios and cached results using React Query.
- Built a responsive UI with Chakra UI and added filtering and search features.

TECHNICAL SKILLS

Languages: Javascript/TypeScript, Go

Frontend: React.js, Next.js, TailwindCSS, Testing(Vitest)

State Management: Zustand, Redux/RTK, TanStack Query

Backend: Node.js/Bun.js, Hono.js, Express.js, tRPC, Socket.io

Databases: PostgreSQL(Prisma, Drizzle, Sqlc), MongoDB, SQLite

Other technologies: Docker, Git/GitHub, AWS (basic)

EDUCATION

University of Mumbai

8.38 CGPI

Bachelor of Science in Information Technology

Jun 2022 – Apr 2025

Relevant Coursework: Data Structures & Algorithms, Operating Systems, Computer Networks, DBMS
