PROFESSIONAL SUMMARY

With over 9+ years of extensive experience in the Information Technology sector, I bring a deep expertise in the complete Software Development Life Cycle (SDLC), encompassing requirements gathering, analysis, design, development, testing, deployment, and ongoing maintenance, with a particular focus on Agile methodologies. I have a demonstrated ability to deliver enterprise-level applications leveraging J2EE technologies, Spring MVC, and Spring Boot, while also maintaining strong proficiency in SQL database management systems such as MySQL and SQL Server. My skill set includes expertise in version control systems like GIT and Bitbucket, as well as utilizing industry-standard IDEs such as Eclipse, IntelliJ IDEA and NetBeans to develop robust software solutions. Known for my adaptability and quick learning, I excel at seamlessly integrating new technologies and consistently managing workloads to meet stringent project deadlines.

SKILLS AND ABILITIES

Programming Languages: Core Java, Java EE

Frameworks & Technologies: Java 8, Spring Framework, Spring Boot, Hazelcast
Hibernate, JDBC, Maven, MySQL, Junit, Mockito

Database: MySQL and SQL Server

Tools: Eclipse, Postman, MySQL Workbench, SQL Server, GitHub, Log4J, SLF4J, Gradle, Maven, Jira

Development Practices: Agile, Waterfall

Operating System: Linux, Windows

Software Engineer 1 - Asite Solutions Private Limited

Nov 2021 – Jan 2026

- Designed and implemented RESTful web services for applications utilizing Spring Boot, ensuring robust and scalable service architecture.
- Engaged in the development and enhancement of multiple application modules, driving functional improvements and feature expansions.
- Contributed to the ongoing enhancement and optimization of the Asite Marketplace platform's codebase, ensuring high performance and maintainability.
- Cooperated closely with the QA team to facilitate bug resolution and provide comprehensive production support, enhancing overall application stability and user experience

Deputy Assistant Manager – Finlogic Technologies India Private Limited

May 2020 - Oct 2021

- Worked closely with users to define and implement functionalities that meet their specific requirements, ensuring that the final product aligns with their needs.
- Designed and built RESTful web services for distributed applications using the Spring Framework, improving the way different systems communicate with each other.
- Contributed to the development of various functional, business, and testing modules, following the waterfall methodology to ensure clarity and thorough documentation throughout the process.
- Collaborated with the QA team to identify and fix bugs, providing production support to enhance application performance and reliability for users.
- Managed code revisions and united with team members using Git for version control, keeping our development process organized and efficient

Software Engineer – Ufficio India Software Consultants Pvt. Ltd**Feb 2018 - Mar 2020**

- Created a variety of tracking reports to provide insights and facilitate data-driven decision-making for stakeholders.
- Delivered third-party application integration services tailored to meet the unique needs of specific clients, enhancing overall system functionality.
- Developed RESTful services using Java/J2EE to support seamless interactions between various applications.
- Engaged with clients to gather detailed requirements, ensuring that complex needs were understood and addressed effectively in the project.
- Worked together with the QA team to identify and resolve bugs, providing production support to maintain optimal application performance.
- Modernized legacy applications by rewriting them with contemporary technologies, improving performance and usability.
- Utilized Git for version control, ensuring efficient collaboration and organization throughout the development process.

System Engineer – DeviceTalk Technologies Private Limited**Jan 2017 – Jan 2018**

- Designed and made an Android application that enhances user engagement and meets client specifications.
- Contributed to the design and implementation of diverse application features, ensuring maintainability and scalability of the system.
- Modernized legacy web services by rewriting them with current technologies, improving performance and maintainability.
- Implemented the AMQP messaging protocol in applications to facilitate reliable messaging and improve overall system integration.

PROJECTS

Marketplace for Asite (Asite Solutions Pvt Ltd)**2021-2024****(Java1.8, Spring Boot, SQL Server, Gradle, Junit, Consul, Hazelcast, Mockito, Git)**

- The Marketplace is a sophisticated supply chain management (SCM) web application designed to facilitate connections between buyers and vendors. It provides a secure central hub for prequalification information, enhancing transparency and trust in the procurement process. The application features robust bid management capabilities, enabling users to efficiently receive tender invitations and manage offers. Additionally, it includes functionality for mutual performance reviews, allowing users to assess and identify optimal opportunities for collaboration and growth.

Capital Market (Finlogic Technologies India Pvt Ltd)**2020-2021****(Java1.7, Spring MVC, Web Service (Rest), Gitlab)**

- This backend project serves as an intermediary between buyers and sellers in the stock market. It generates transaction files containing detailed records of client activities in the market. Based on these files, the system efficiently handles various processes, including payments, fund transfers, security settlements, and ledger maintenance. Additionally, the project offers a range of reporting features to provide valuable insights into transaction history and performance.

Vehicle Tracking System (Ufficio India Consultant Ltd)**2018-2020****(Java1.7, MySQL, GIT, Rest Webservice)**

- This advanced fleet management software is created to be compatible with any GPS devices, allowing for the tracking of a wide variety of fleet vehicles, including cars, trucks, buses, and bikes.

It caters to all types of fleet industries, whether small, large, private, or commercial. The software provides essential features for fleet maintenance, driver behavior monitoring, and improving vehicle efficiency, as well as theft prevention. Additionally, it offers a range of functionalities, including timely alerts, comprehensive reporting, and visual charts to facilitate data analysis and decision-making.

Plant Machinery Monitoring Application (DeviceTalk Technologies Pvt Ltd.)

2017-2018

(Java1.7, Spring boot, Android, SQL Server, AMQP Protocol)

- PlantApp is a comprehensive plant machinery monitoring application that provides real-time data on machinery status and plant information. Users can access this critical information anytime and from anywhere through a mobile application, ensuring timely insights and effective management of plant operations

EDUCATION

- **Master of Computer Application (Computer Science)**

2017

D. Y. Patil institute of MCA, Akurdi Pune (Pune University)

- **Bachelor of Computer Application (BCA)**

2014

College of Applied Science and Professional Studies Chikhli. (VNSGU Surat university).
